SUMMARY
Plan4Health connects communities across the country, funding work at the intersection of planning and public health. Anchored by American Planning Association (APA) chapters and American Public Health Association (APHA) affiliates, Plan4Health supports creative partnerships to build sustainable, cross-sector coalitions. The Baltimore Greenway Trails Coalition seeks to address health equity and safety in transportation infrastructure through building an urban trail network that connects existing trails to disconnected neighborhoods, parks, anchor institutions, and to the downtown core.

CHALLENGE
Baltimore, MD is a community that is lacking active transportation infrastructure, with a fragmented built environment. Opportunities for physical activity, resident mobility, and connectivity are inhibited by a combination of factors, including deindustrialization, auto-centric planning and single-use codes. Resident mobility and connectivity is further hindered by a lack of public transportation options and over 30 percent of residents not having access to a car. Nearly 30 percent of residents also reported no physical activity. These low rates of physical activity are accompanied by high rates of chronic disease, including obesity (31 percent), Type 2 diabetes (12.4 percent), and heart disease (26 percent). Additionally, the unemployment rate is 13.9 percent, more than double the rate for Maryland as a whole. The ability to reach a place of employment was identified by residents as the biggest barrier to staying employed.

“Not everyone understands what a bike lane is, but nearly everyone can imagine riding a bike on a trail. The coalition has given us a mechanism to engage diverse residents from across the city in conversations about livable streets and healthy communities.”

Liz Cornish
Executive Director, Bikemore
SOLUTION
The Baltimore Greenway Trails Coalition will address issues in the built environment and create a more robust trail network to increase and sustain connectivity and opportunities for physical activity. The coalition will work with new and established partners to identify opportunities and barriers through community outreach and engagement, create and implement demonstration projects to showcase active living opportunities, and ensure that active living is incorporated into neighborhood plans. This project will help to inform and establish best practices and will be shared with other regional trail networks.

RESULTS
In Fall 2017 the Baltimore Greenways Trail Coalition conducted extensive community engagement at the Druid Hill Farmers Market along the Jones Falls Trail, working with neighborhood partners in the Greater Mondawmin Community. At the market we talked with residents about trails and safe streets as part of a healthy city. We captured data from area residents while they explored the Plan4Health project map and shared their thoughts on walking, biking and what makes a healthy community. As part of this outreach we were able to hire a local artist to install a pop-up mural crosswalk across a busy intersection which serves to better connect residents to the park, the trail and the farmers market. This temporary intervention speaks to the need for permanent improvements in pedestrian and bike infrastructure which the coalition is working on.

SUSTAINING SUCCESS
Residents of Baltimore can learn more about the coalition and ways to get involved by visiting the coalition’s Facebook page (www.facebook.com/BaltimoreGreenwayTrailsCoalition). This page includes information on upcoming events and planning activities as well as information from advocates and partners.
